Modes of a published model

You can view a published model in two modes:

- **Model view** - In this mode, the content pane of a published model portal shows only the content of the item selected in the navigation pane. The **Model view** is the default mode of a published model.
- **Document view** - This mode allows you to browse a published model as a continuous document. You can scroll through the entire content of the selected model view, or select an item in the navigation pane to load the related content.

To change the mode of a published model

1. Click ▼ in the app bar of a published model and select the model view, the mode of which you want to change.
2. Click ⁝ on the right side of the app bar and select the desired mode (**Model view** or **Document view**).

After changing the mode of a published model view, the view is reloaded and displayed in the selected mode.
