## **Paths**

Paths are presentation elements created for such model elements as Relationships. Path has the following attributes:

- Supplier the presentation element of a Relationship supplier. Use method com.nomagic.magicdraw.uml.symbols.paths.PathElement. getSupplier() to access this element.
- Client the presentation element of a Relationship client. Use method PathElement.getClient() to access this element.
- Supplier point the connection point of a path and supplier element. Use method PathElement.getSupplierPoint() to access this point.
- Client point the connection point of a path and client element. Use method PathElement.getClientPoint() to access this point.
- Break points a list of path breaking points between supplier and client points. This list can be empty if path is straight. Use method *PathElement* .getBreakPoints() to access this list.
