

Group type mapping mode

The **Group Type Mapping** mode arranges nodes into groups. DataHub sorts the nodes by their types. With **Group Type Mapping**, each individual node in the data tree is hidden. Therefore, you can finish mapping the nodes faster.

To use group type mapping

1. From the **Operation** drop-down list in DataHub Explorer, select **Copy Data** or **Copy Data with Sync**. The **Copy Data** or **Copy Data with Sync** dialog opens.
2. From the **Mapping Mode** option, select **Group Type Mapping**.

3. Select a source node type and a target node type.
4. [Complete the attributes mapping and continue mapping all of the data types.](#)
5. Click **OK**.
