# Rename Dialog

Use the Rename dialog to change the name of a project or module used in the project. In server projects, it is safe to change module names as modules are identified by a module ID in the Teamwork server, not by a module name.

To open the Rename dialog:

1. Open the **Manage Projects** dialog.
2. Select the project whose name you want to change.
3. Click the **Rename** button.

Rename dialog

Element	Function
Name	Type the new project name.
Category	Select the category for the project or create a new one.

- User management
- Manage Projects Dialog
- Open Server Project Dialog
- Commit Project to the Server dialog
- Project Versions dialog
- Use Server Project wizard
