

TWCloud server parameters

The following parameters are needed for the authentication server to connect to TWCloud REST API to authenticate the user.

Parameter	Description	Default value
twc.server.host	The TWCloud's server IP address (IP address should be specified instead of template <code>\${twc.server.ip}</code>).	User-entered machine IP address or <code>\${twc.server.ip}</code> in the case of no-install zip
twc.server.port	The TWCloud's server port.	8111
twc.server.protocol	The TWCloud's server protocol.	https
twc.server.identity. check.api	The TWCloud's endpoint to check a user's identity .	/osmc/ping/user
