

OV-2 diagram

Creating an OV-2 diagram using the CSV Import plugin requires the *UPDM* plugin. Therefore, the *UPDM* Profile must be loaded prior to running the example given in this section.

This section deals with creating an OV-2 diagram from a CSV file. See the CSV file shown in figure below. The example also shows you how to import **Performer**, **Node Association** and **OperationalExchange** from the same sample file in successive stages, which are explained in the following sections. Again, we will choose only a subset of columns from this CSV file each time.

A	B	C	D	E	F	G	H
DiagramName	Performer	Source	Target	DiagramOwner	OperationalExchange	Source	Target
OV-2	MonitoringNode	MonitoringNode	TacticalC2Node	OV-2	WarningOrder	SearchNode	PlaceOfSafety
