

# What's new in MagicDraw 18.0 LTR SP1

Release date: 1st July 2014

---

This service pack introduces the ability to write comments on any element or diagram in a Software Engineering Portal report as well as resolves Model Browser refreshing problems together with few other issues found while working with server projects, web portal reports, and tables and matrices.

## New Feature: Comments in Software Engineering Portal Report

Now you can provide feedback on any element or diagram while reviewing a Software Engineering Portal (SEP) report of the project. Just select the element/diagram, click the envelope icon , type the comment, and click **Send**. The author of the element/diagram instantly gets the comment to his/her [Atlassian JIRA](#) account, e-mail system, or any other system integrated with the SEP report.

## **Main Fixes of Service Pack**

### **Model Browser**

- Model Browser refreshes immediately after new element creation, and corrupted elements no longer appear in it without reason.
- The unhandled error no longer appears on editing the EnumerationLiteral name in the Model Browser.

### **Performance**

- Tables and dependency matrices open much more quickly, if compared with MagicDraw 18.0.

### **Teamwork Server integration**

- The order of ordered elements, such as pins, operation parameters, or attributes, persists after commitment with updates, if these elements have been renamed.
- A locally saved server project can be successfully committed to the server, after the upgrade of the server.

### **Web Portal reports**

- Clicking an element inside the package opens the custom content of that element, but not the one of the owning package.

### **Tables and Dependency Matrices**

- The unhandled error no longer appears, when trying to specify a slot value in the Instance table, if the type of that slot is a classifier.
- MagicDraw no longer stops responding after you undo the removal of a satisfy relationship.
