

What's new in SysML Plugin 18.0 LTR SP6

Released on: June 29, 2016

The Issue Fixed in This Service Pack

- There is now a validation rule which will highlight Connectors with incorrect Connector End property Path resulting from moving a Part or the Connector in the Containment tree.
- The Update Property Path message no longer to appears when working with SysML Internal Block Diagram (IBD) on Teamwork Server. It improperly appeared in certain situations including when, opening IBD, trying to commit the project, and trying to unlock the connectors.
- Mathematical expressions were not properly wrapped from MATLAB source code into the model when Matlab file does not contain the required ";" or "end" inside of it.
- Generic numbering started numbering from the next initial value rather than what was defined.
