

What's new in Cameo Business Modeler Plugin 18.0 LTR SP1

Release date: 30th June 2014

With this service pack we introduce the ability to write comments on any element or diagram in a Process Portal report as well as resolves few issues regarding information completeness in this type of reports.

New Feature: Comments in Process Portal Report

Now you can provide feedback on any element or diagram while reviewing a Process Portal report of the project. Just select the element/diagram, click the envelope icon , type the comment, and click **Send**. The author of the element/diagram instantly gets the comment to his/her [Atlassian JIRA](#) account, e-mail system, or any other system integrated with the Process Portal report.
