

What's new in Cameo Business Modeler Plugin 18.0 LTR SP2

Release date: 29th September 2014

The summary below contains the main fixes included in the service pack.

Diagramming

- You can now quickly assign a Resource to the BPMN Process by using the new **Assigned Resources** property in the BPMN Process Specification window.
- The **Create** button is no longer dimmed and you can create a message in the **Select Message** dialog, when creating a Referenced Message for the Message Flow.
- The Task element icon no longer covers the name of the Task in the BPMN Process diagram.
- In the BPMN Process diagram, the Call Activity is created instead of the Call Behavior when dragging a BPMN Process element from the Containment tree onto the Pool symbol.
- The name of a Message Flow now displays in the **Select Message Flows** dialog when assigning this Message Flow to the Choreography Task.

Validation

- The following validation error no longer displays during the export to a BPMN2 File: *No matching attribute evaluation rule(s) for this expression, searched for path name participantRef.*

Reports

- SubProcess diagrams are now included in the Business Architecture Report template.

Matrix

- You can now edit the BPMN Resources Usage Matrix in the *Training Center.mdzip* sample.
