

Starting a collaboration session

Before logging in to any of No Magic's servers, you must:

- Have a user account on the server.
- Be sure the server is running.
- Ensure the server and the client application use the same Java version. Small Java version updates may differ.

 The server Java version 1.8.0_45 will work with the client Java version 1.8.0_51.

To log in to a server

1. From the **Collaborate** menu, select **Login**. The **Login** dialog opens.
2. Login to a server:
 - To login using "username/password" authentication:
 - i. Click the **Login** tab.
 - ii. Type your user name and password.

The screenshot shows a 'Login' dialog box with a blue title bar. Inside, there's a section titled 'Login to a server' with the instruction 'Enter user name, password and server address to login to the server.' To the right of this text is an illustration of a server rack. Below the instruction, there are two tabs: 'Login' (selected) and 'Single Sign On'. The 'Login' tab contains several input fields: 'User name:' with the text 'billybob', 'Password:' with masked characters, 'Server name:' with the text '10.2.4.76', and 'Server type:' with a dropdown menu showing 'Teamwork Cloud'. There are also two checked checkboxes: 'Auto Login to Server' and 'Use Secured Connection (SSL)'. At the bottom, there are three buttons: 'OK', 'Cancel', and 'Help'.

- For users having a single ID and password for multiple software systems (valid only for Teamwork Cloud Server):

- i. Click the [Single Sign On](#) tab.

3. Provide the server name (address) and select server type. If you need to specify a server port, type <server name> : <port number>, for example 10.2.2.47:3579.

For Teamwork Cloud Server users

If a **Single Sign On** property is selected to login, the Teamwork Cloud Server is automatically selected as a type.

4. If you want the client application to remember your credentials and automatically log in to the server next time upon starting the client application, select the **Auto Login to Server** check box.
5. If you need to connect to the server using the SSL connection, select the **Use Secured Connection (SSL)** check box.

The SSL connection must be established on both the server and the client side.

6. Click **OK**.
7. Wait while you are connected to the server, and then you can start performing collaborative tasks.

To log out of the server

- From the **Collaborate** menu, select **Logout**.
