

What's New in Cameo Concept Modeler 18.0 LTR SP4

Released on: March 31, 2016

Usability improvements

- A new **Concept Modeling Diagram** type and palette has been added to aid in the creation of Concept Models.
- Creating an association now provides default names for all navigable properties derived from each property's type.
- Replaced **Make subclasses complete** and **Make subclasses disjoint** menu options with the new **Subclasses Complete** and **Subclasses Disjoint** menu options introduced in MagicDraw 18.3.

Bug fixes

- **Go To > Subsetted property on diagram** and **Go To > Redefined property on diagram** menu options:
 - no longer fail for large diagrams
 - no longer cause a stack trace in MagicDraw 18.0 and 18.1.
- Properties stereotyped as «Annotation Property» no longer export as data properties.

AutoStyler 18.0

- **Bug fix:**
 - Repairing a style no longer ignores a specialized diagram style.
