- [Generating multiple reports](#)

## Using the Generate command

You can enter the Generate command in the command line to generate a report.

To generate a report from the package scope

- `generate -project projectFileName -output outputFileName -template templateName -package packageNameList`

To generate a report from the element scope

- `generate -project projectFileName -output outputFileName -template templateName -element elementNameList`

To generate a report from the option specified in the properties file

- `generate -properties propertiesFileName`

To generate a Teamwork password for a properties file

- `generate -generatepassword password`

## Description

The Generate command creates a report document with a received set of information from arguments and parameters. The information will then be generated as a report document to the specified output file. By default, an argument is the specified data of the invoked parameters. If the `-properties` option is specified, the argument is the name of a properties file. A properties file contains other parameters, along with the specified data of each parameter.

### Synopsis

Command	Function
<code>-project projectFileName</code>	Specifies the MagicDraw project path as a file name.
<code>-output outputFileName</code>	Specifies the output file path as a file name.
<code>-template templateName</code>	Specifies a template name used to generate a report document. <div style="border: 1px solid #ccc; padding: 10px; margin-top: 10px;"><p> <b>Note</b></p><ul style="list-style-type: none"><li>• The template must exist in MagicDraw prior to using this command, otherwise an error will occur.</li><li>• If the template name is not specified, the template specified in the Report Data (specified in the <code>-report parameter</code>) will be used instead.</li></ul></div>

-templatePath templatePath	<p>Specifies a template path used to generate a report document. Both absolute and relative paths are allowed for this command. The specified template file must have proper structure as it has been added through the <b>Report Wizard</b> dialog.</p> <div style="border: 1px solid #ccc; padding: 10px; margin-top: 10px;"> <p> <b>Note</b></p> <p>If both <b>-template</b> and <b>-templatePath</b> are specified in the same command, the error will occur.</p> </div>
-package packageNameList	<p>Specifies the name of one or more packages in a MagicDraw project to be included in the report. Multiple package entries must be separated by a semicolon (;).</p> <div style="border: 1px solid #ccc; padding: 10px; margin-top: 10px;"> <p> <b>Warning: Duplicate qualified name</b></p> <p>Do not enter a duplicate name of a root Model package or its immediate child package to the <b>-package</b> option.</p> </div>
-element elementNameList	<p>Specifies the name of one or more elements from a MagicDraw project to be included in a report. Element entries must be separated by a semicolon (;).</p>
-elementID	<p>Specifies the element ID of one or more elements in a MagicDraw project to be included in the report. Multiple element entries must be separated by a semicolon (;).</p> <div style="border: 1px solid #ccc; padding: 10px; margin-top: 10px;"> <p> <b>Note</b></p> <ul style="list-style-type: none"> <li>You can get an element ID by using <b>\$element.elementID</b>.</li> <li>The element ID will change when the local project is added to Teamwork Cloud. Please make sure the element ID is up-to-date.</li> </ul> </div>
[options]	Command-line options.
-properties propertiesFileName	Specifies the name of a properties file to utilize. Use only with <b>-properties</b> .
- generatepassword password	Generates an encrypted password to be used with a properties file.

## Options

The command line feature supports a set of options useful in adding additional configuration possibilities.

Command	Function
-report reportDataName   reportDataElementID	<p>Specifies the name of a <a href="#">Report Data</a> file or Report Data element.</p> <div style="border: 1px solid #ccc; padding: 10px; margin-top: 10px;"> <p> <b>Note</b></p> <ul style="list-style-type: none"> <li>The Report Data file must exist in MagicDraw prior to using this command, otherwise an error will occur.</li> <li>The value for this command can be either a Report Data name or Report Data element ID.</li> <li>If the <b>-report</b> parameter is not specified, the previous Report Data will be set and used instead.</li> <li>If you want to generate a report from the server project, use an Element Server ID value instead.</li> </ul> </div>
-autoImage 0 1 2 3	<p>Specifies how an image will be shown in a report document. The default value for this argument is <b>1</b>.</p> <ul style="list-style-type: none"> <li>0 – No resize.</li> <li>1 – Fit image to paper (large only).</li> <li>2 – Fit and rotate image (clockwise) to paper (large only).</li> <li>3 – Fit and rotate image (counter-clockwise) to paper (large only)</li> </ul>

<pre>-imageFormat jpg png svg emf  wmf</pre>	<p>Specifies an image format in a report document. The default value for this argument is <b>jpg</b>.</p> <ul style="list-style-type: none"> <li>• <i>jpg</i> – Joint Photographic Expert Group</li> <li>• <i>png</i> – Portable Network Graphics</li> <li>• <i>svg</i> – Scaling Vector Image</li> <li>• <i>emf</i> – Microsoft Windows Enhanced Metafile</li> <li>• <i>wmf</i> – Windows Metafile</li> </ul>
<pre>-recursive true false</pre>	<p>Specifies how to select a package in a MagicDraw project. The default value for this argument is <b>true</b>.</p> <ul style="list-style-type: none"> <li>• <b>true</b> – Select the specified package and its recursive package.</li> <li>• <b>false</b> – Select only the specified package.</li> </ul>
<pre>-includeAuxiliary true false</pre>	<p>Selects packages, including auxiliary packages. The default value is <b>false</b>.</p>
<pre>-outputOnBlankField stringValue</pre>	<p>Shows a string value in a blank field in a report document. The default value for this argument is "".</p>
<pre>-category categoryName</pre>	<p>Specifies a template category.</p>
<pre>-fields [name=value]</pre>	<p>Specifies a variable.</p>
<pre>-server serverName IPAd dress</pre>	<p>Specifies the name or IP Address of a Teamwork Server project.</p>
<pre>-login loginName</pre>	<p>Specifies a login name to log on to Teamwork Server.</p>
<pre>-password password</pre>	<p>Specifies a password to log on to Teamwork Server.</p>
<pre>-spassword encryptedPasswo rd</pre>	<p>Specifies an encrypted password to log on to the server. This option is available only in a properties file.</p> <p>You can get encrypted password by entering this command below in command line prompt.</p> <pre>generate -generatepassword "enter_your_password_here"</pre>
<pre>-upload serverAddress</pre>	<p>Specifies a serverAddress consisting of a scheme, userInfo, host, port, and path to connect and upload a generated report to a server (see <a href="#">Upload generated report to server</a>).</p>
<pre>-overwrite true false</pre>	<p>Overwrites any previously generated files. The default value for this argument is <b>true</b>.</p> <ul style="list-style-type: none"> <li>• <b>true</b> – Overwrites all files automatically (removes any existing file before generating a report.)</li> <li>• <b>false</b> – If the file exists, the following prompt message will open:</li> </ul> <pre>Output file already exists. Would you like to replace the existing file? [y][n]:</pre> <p>If you type 'y' or 'yes', the Report Wizard will generate a new report that replaces the previous one. If you type 'n' or 'no', the Report Wizard will not generate a report and terminate the process.</p>
<pre>-pversion projectVersion</pre>	<p>Specifies a Teamwork project version.</p>
<pre>-servertype tw   twcloud</pre>	<p>Specifies a type of server to connect. The default value is <b>tw</b>.</p> <ul style="list-style-type: none"> <li>• <b>tw</b> - Connect to Teamwork Server</li> <li>• <b>twcloud</b> - Connect to Teamwork Cloud</li> </ul>

-ssl true   false	Specifies if a Secured Connection (SSL) is used. The default value is <b>false</b> . <ul style="list-style-type: none"> <li>• <b>true</b> - Use Secured Connection (SSL)</li> <li>• <b>false</b> - Do not use Secured Connection (SSL)</li> </ul>
-tag tagValue	An additional argument to generate reports from a server project by specifying a server project tag name. The tagValue is non-case sensitive. More than one project version may be returned from specifying one tag value. Hence, one report generation process may generate multiple reports. You cannot use this command with <code>-pversion</code> .
-incremental true false	Specifies the incremental method. The default value is true. <ul style="list-style-type: none"> <li>• <b>true</b> - The output report shall be generated by appending a new generated output file name with the incremental number.</li> <li>• <b>false</b> - The latest project version in the returned project collection. Use this command with <code>-tag</code> only.</li> </ul>
-leaveprojectopen	Leaves the project open per property file after generating the report, in a series of report generation. The default value is <b>false</b> .

## Using command line

You can use the command line on Windows, Linux, or Unix.

To use the command line on Windows

1. Run a command line console. In the Console window, go to the local installation of the MagicDraw application.
2. Go to the `plugins\com.nomagic.magicdraw.reportwizard` folder, and type the command line there.

To use the command line on Linux or Unix

1. Run a terminal (command line console). In the Console window, go to the local installation of the MagicDraw application.
2. Go to the `plugins\com.nomagic.magicdraw.reportwizard` folder, and type the command line there.

See the following examples of command line on Windows and Linux or Unix respectively.

### On Windows

```
generate -properties "C:\\output\\prop.properties"
```

### On Windows

```
generate -project "C:\\MagicDraw\\samples\\diagrams\\class diagram.mdzip" -output "C:\\output\\output.rtf" -
template "Class Specification Report" -package "Model" -report "Built-in" -autoImage 1 -imageFormat png -
recursive false -outputOnBlankField "#NA" -fields "[Author=NMA][Company=No Magic]"
```

### On Linux or Unix

```
./generate.sh -project "/home/project/project.mdzip" -output "/home/output/output.rtf" -template "Class
Specification Report" -package "Model" -report "Built-in" -autoImage 1 -imageFormat png -recursive false -
outputOnBlankField "#NA" -fields "[Author=NMA][Company=No Magic]"
```

## Generating multiple reports

You can open multiple projects and generate multiple reports before MagicDraw shuts down. The **generate** command with the `-properties` option accepts multiple properties files as shown below.

```
generate -properties <file1.properties> <file2.properties> <file3.properties>...
```

For example

```
generate -properties "property1.properties" "property2.properties"
```

#### Note

**Template**, **output**, **package**, and **project** are the required data for each property file.

The following parameters are reset when finishing generating a report for each property file. Other parameter values affect subsequent property files, if there are no overridden values.

- `-project`
- `-output`
- `-template`
- `-templatePath`
- `-tag`
- `-pVersion`
- `-recursive`
- `-category`
- `-includeAuxiliary`

#### Tip

When large-size projects need to be loaded and closed for many property files, it takes longer time to generate reports. In this case, you can use **-leaveprojectopen** as an option to reduce memory for loading each project when starting to generate a new report.

```
generate -leaveprojectopen true -properties "property1.properties" "property2.properties"
```

#### Note

`-leaveprojectopen` needs to be specified before `-properties`.
