

# Cameo Enterprise Architecture Documentation

This is the home page of Cameo Enterprise Architecture documentation.

Cameo Enterprise Architecture is based on the award-winning MagicDraw modeling platform. The solution retains all the best diagramming, collaboration, persistence, and documentation capabilities while offering more customized capabilities tailored to **enterprise architecture** needs.

The documentation of Cameo Enterprise Architecture is a package that includes the documentation of these products and plugins:

## Docs of other versions

- [Cameo Enterprise Architecture 18.2](#)

## MagicDraw Documentation

Introduces the main features of modeling tool: working with projects, UML 2 modeling and diagramming, collaboration capabilities, and many more core features.

## UPDM 2 Plugin Documentation

Provides descriptions of UPDM 2 diagrams and elements, plus introduces UPDM 2 specific features as well as gives guidelines for building enterprises.

## UPDM 3 Plugin Documentation

Provides descriptions of UPDM 3 diagrams and elements, plus introduces UPDM 3 specific features as well as gives guidelines for building enterprises.

## SysML Plugin Documentation

Provides descriptions of SysML diagrams and elements, plus introduces SysML specific features as well as gives guidelines for building systems.

## Cameo Requirements Modeler Plugin Documentation

Guides you through the import, export, and management of SysML requirements.

## Cameo Simulation Toolkit Documentation

Provides instructions on how to test the system reactions to user interaction or predefined testing data and execution scenarios.
