This is the home page of Cameo Systems Modeler documentation.

Cameo Systems Modeler is based on the award-winning MagicDraw modeling platform. The solution retains all the best diagramming, collaboration, persistence, and documentation capabilities while offering more customized capabilities tailored to **systems engineering** needs.

The documentation of Cameo Systems Modeler is a package that includes the documentation of these products and plugins:

[MagicDraw Documentation](#)

Introduces the main features of modeling tool: working with projects, UML 2 modeling and diagramming, collaboration capabilities, and many more core features.

[SysML Plugin Documentation](#)

Provides descriptions of SysML diagrams and elements, plus introduces SysML specific features as well as gives guidelines for building systems.

[Cameo Requirements Modeler Plugin Documentation](#)

Guides you through the import, export, and management of SysML requirements.

[Cameo Simulation Toolkit Documentation](#)

Provides instructions on how to test the system reactions to user interaction or predefined testing data and execution scenarios.

[Installation and licensing \(old\)](#)

Provides the instructions about how to install modeling tool and plugins, add or remove licenses, perform activation.
