

What's New to CD in 18.5 SP4

Released on: January 15, 2018

Cameo DataHub 18.5 SP4 comes with the exclusive additional capabilities of IBM Rational DOORS Next Generation that allow you to specify authentication URLs to connect to authentication servers and to make connection on the Cloud (Jazz.net). This service pack also fixes problems with extra space from copying HTML text to DOORS objects, unavailable tags for mapping, and malfunctioning from updating Teamwork projects. Download it today at nomagic.com, or contact your sales representative, and don't forget to give us your feedback on [LinkedIn](#), [Twitter](#) or [Facebook](#). Please check the latest [documentation](#) and additional [resources](#).

Key Issues Fixed in this Service Pack

- Authentication URLs can now be specified for IBM Rational DOORS Next Generation connection to authenticate any dedicated authentication servers.
- It is now possible to connect IBM Rational DOORS Next Generation on the Cloud (Jazz.net) to DataHub.
- No extra space in between lines when copying HTML text of elements to DOORS objects.
- The problem that tags are not available for mapping when selecting the **Define Target Type from Attribute Value** option has been fixed.
- The issue that DataHub malfunctions when updating Teamwork projects that contain DH_Relation without Classifiers has been solved.
