

What's New to UPDM 2 in 18.4

Released on: July 29, 2016

UPDM 2 Plugin 18.4 for modeling tools developed adds a new feature to enhance your enterprise architecture (EA) modeling experience. Included in this update is a feature that will help you construct and visualize your models faster. This new feature makes us confident that UPDM 2 version 18.4 combined with the updates to MagicDraw in 18.4 will enhance your EA modeling experience. Get them both today on nomagic.com or contact your sales representative, and don't forget to give us your feedback on [Twitter](#) or [Facebook](#).

Parts and Ports Management

Managing and creating Parts and Ports in all UPDM internal diagrams (e.g., [SV-2 Systems Internal Resource Flow Description](#)) has been simplified by combining the **Select Parts** and **Select Ports** dialogs into a new **Display Parts /Ports** dialog. This new dialog and **Display**

Related Elements button  allows you to display Parts/Ports and nested Parts/Ports, as well as hide Ports. New functionality has been added to allow bulk display of Parts and Ports based on metatype and custom stereotypes. These new features allow for a simpler workflow and increased speed and accuracy of internal structure creation.
