MagicDraw Documentation

Introduces the main features of modeling tool: working with projects, UML 2 modeling and diagramming, collaboration capabilities, and many more core features.

UPDM 2 Plugin Documentation

Provides descriptions of UPDM 2 diagrams and elements, plus introduces UPDM 2 specific features as well as gives guidelines for building enterprises.

UPDM 3 Plugin Documentation

Provides descriptions of UPDM 3 diagrams and elements, plus introduces UPDM 3 specific features as well as gives guidelines for building enterprises.

The UPDM 3 plugin supports the UAF 1.0 beta version through Version 18.5. Beginning with Version 19.0, UPDM 3 will be renamed to UAF plugin, and supports the UAF 1.0 standard confirmed by OMG. We strongly advise using the UAF plugin (19.0) in order to be compliant with the latest and full version of the UAF standard.

SysML Plugin Documentation

Provides descriptions of SysML diagrams and elements, plus introduces SysML specific features as well as gives guidelines for building systems.

Cameo Requirements Modeler Plugin Documentation

Guides you through the import, export, and management of SysML requirements.

Cameo Simulation Toolkit Documentation

Provides instructions on how to test the system reactions to user interaction or predefined testing data and execution scenarios.

Installation and licensing (old)

Provides the instructions about how to install modeling tool and plugins, add or remove licenses, perform activation.
