Installing Cassandra on Windows

(!)

If you are upgrading Teamwork Cloud from a version lower than 18.5, do not upgrade Cassandra to 3.11-x until you have followed the directions for Upgrading Teamwork Cloud.

This page provides the instructions to install and configure Cassandra on Windows.

Prior to installing Cassandra, it is important to understand how Cassandra utilizes disk space in order to properly configure the host server.

Disk space depends on usage, so it's important to understand the mechanism. The database writes data to disk when appending data to the commitlog for durability and when flushing memtables to SSTable data files for persistent storage. The commit log has a different access pattern (read/writes ratio) than the pattern for accessing data from SSTables. This is more important for spinning disks than for SSDs.

SSTables are periodically compacted. Compaction improves performance by merging and rewriting data and discarding old data. However, depending on the type of compaction and size of the compactions, during compaction disk utilization and data directory volume temporarily increases. For this reason, be sure to leave an adequate amount of free disk space available on a node.

Compaction

In a worst-case scenario, compaction can potentially use the same amount of disk space as the dataset. Therefore, your data drive utilization should be monitored for maximum growth, and volume size increased if it reaches over 80% utilization.

Cassandra data and commit logs should not, under any circumstances, be placed on the drive where the operating system is installed. Ideally, a server would have 3-4 drives or partitions. Drive C:, the OS partition can be used as the target for the application. Drive D: should have adequate amounts of storage to accommodate your data. Drive E: would hold you commit logs (and unless SSD, should be on a different physical disk than the data partition), and Drive F: would be allocated for backups.

Commit logs

Commit logs should not be placed on the same partition as data. Commit log utilization varies from a few megabytes up to 8 gigabytes, constantly fluctuating as memtables get flushed to disk. This behavior, combined with transient growth of the data volume during compaction, can result in a database crash due to running out of disk space.

Following Microsoft Best Practices:

- Your OS partition should be at least 60 GB.
- The size of Drive D:, your data partition, will be dictated by the size and activity of the models in the repository. You should allocate as much as feasible but under no circumstances less than 250 GB.
- Drive E:, your commit log partition should be at least 10GB (the commit logs are 8GB).
- Drive F:, your backup partition, should be of the same size as Drive D:, and be located on a different physical drive.

Please refer to http://cassandra.apache.org/doc/latest/operating/hardware.html for explanations on hardware selection.

Installing Cassandra on Windows

To install Cassandra on Windows

- 1. Login to https://software.3ds.com/ with your 3DEXPERIENCE ID. By default, you will be redirected to Download My Supported Software.
- 2. Select CATIA brand.
- 3. Select No Magic product line

		oad My Supported So	ftware Do	wnload My Orders			\star 🕄
Multi-brand platform				Brand-relate	d product lines		
3D EXPERIENCE [®]		Catia	SOLIDWORKS	ENOVIA		simulia	GEOVIA
and V6	V5	EXA LEAD	3DVIA		NETVIBES	3DEX CITE	DELMIAWORKS
SCATIA SHAPE THE WORLD WE LIVE IN							
ICEM Surf		Q-Checker for V6			Simulayt for V5		
CATIA V4		Q-Checker for V5			ELECTRE & ELECTRE	Connectors for V5	
Helix		Q-Checker for V4		3	No Magic		
Dymola		SFE			Argosim		
AITAC Smart Drawings		Simulayt for V6			Reqtify - ControlBui	ld - AUTOSAR Builde	21
SCANER							

4. Select Release (e.g. major version) and Level (e.g service pack).

5. Locate CATIA No Magic Servers - Controlled Availability pack.

A To find out the content of the volumes, refer to the 3DS Media list for 2021x R2 HF1 release page.

6. Download the 2/2 volume by either:

a. clicking the 2/2 download button,

b.	or clicki	clicking the second volume displayed under Show details button.							
	Produc No Mag		4	Release No Magic 2021x	Level	jic 2021x Refresh2	Fixes for this	s level

		No_1	Magic_2021x_Refresh2.f	AM_NM_LEG_Servers.AllOS.	2-2.zip 6		MD5: 08366ce98a39cf64aa94ceffa88651ab Size: 1.7 G8		

- 7. Extract the downloaded file and locate the cassandra_<version_number>_installer_win64 file in the extracted folder.
- 8. Right-click on the downloaded Cassandra installer and select **Run as administrator**. Follow the steps in the installer setup wizard to install Cassandra.

Cassandra 3.11.2	- 🗆 X
	Introduction
 Introduction Choose Install Folder 	InstallAnywhere will guide you through the installation of apache-cassandra-3.11.2.
 Choose data folder Choose a commit log fold 	It is strongly recommended that you stop the existing Cassandra, if any, before continuing with this installation.
 Pre-Installation Summary Installing Install Complete 	Click the 'Next' button to proceed to the next screen. If you want to change something on a previous screen, click the 'Previous' button.
	You may cancel this installation at any time by clicking the 'Cancel' button.
nstallAnywhere	
Cancel	Previous

Once you finished installing and configuring Cassandra, you can install TWCloud.

Uninstalling Cassandra on Windows

To uninstall Apache Cassandra:

• Go to Control Panel > Program and Features and right-click Apache Cassandra and click Uninstall.
