

# DataHub basic operations

After installing Cameo DataHub and deploying the driver for DOORS, you can begin to add Data Sources. Data Sources can be added for the following requirements management systems

- IBM DOORS
- IBM DOORS Next Generation
- CSV Files

Once you have the Data Sources in DataHub open, you can start using more advanced DataHub features, e.g., copying data and DHLink relations between Data Sources. The synchronization features of DataHub are also illustrated in this chapter.
