## Displaying element history

To display the history of an element, do one of the following

- Right-click the element or its symbol. From the shortcut menu, select **History**.

- Select the element or its symbol and press Ctrl + H.
- Open the [Specification window](#) of the element and click the History button .
- If it is a diagram, right-click an empty space on the diagram pane. From the shortcut menu, select **History**.

### Stopping collecting changes

If retrieving the element history takes too much time, you can click the **Stop** button to complete reviewing changes through different versions of the selected element.

| Book list History  |                                  |               |                           |
|--|----------------------------------|---------------|---------------------------|
| Project Version  | Date                             | Author        | Comment                   |

A list of project versions in the History panel.

You can compare any two versions of an element to see the differences between them.

To display element version properties

1. Open the element's **History** panel as described above.
2. Select the project version.
3. In the panel's toolbar, click the  button or right-click the selected version and select the **Version Properties** command.

 The button is disabled if either no version or multiple versions are selected.

To display the history of an element in a used project

1. Open the element's **Usage History** panel as described above.
2. Select the project version.
3. In the panel's toolbar, click the  button or right-click the selected version and select the **Show History in Used Project** command.

## Comparing element versions

 To compare project versions in the Teamwork Cloud environment, you are required to have a **Read Resources** [permission](#) for every used project in compared versions.

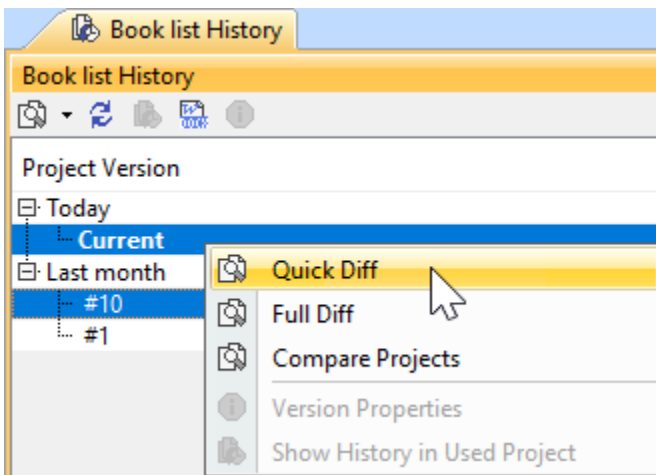

To compare element versions

1. Hold down Ctrl and select the versions you want to compare.

 You can only compare two versions. Please note that if you select more than two items, only two (the latest and the earliest versions) will be compared.

 If you want to compare subsequent versions, you only need to select the later one.

2. On the panel's toolbar, click the  button or right-click the selection and choose either:
  - **Quick Diff** – to inspect changes of element property values (such as documentation, type, or multiplicity) in a *compact form*.
  - **Full Diff** – to inspect changes of diagrams or element property values in a *detailed form*, as well as look at the properties of new relationships and directly related elements (such as new or modified attributes and operations).

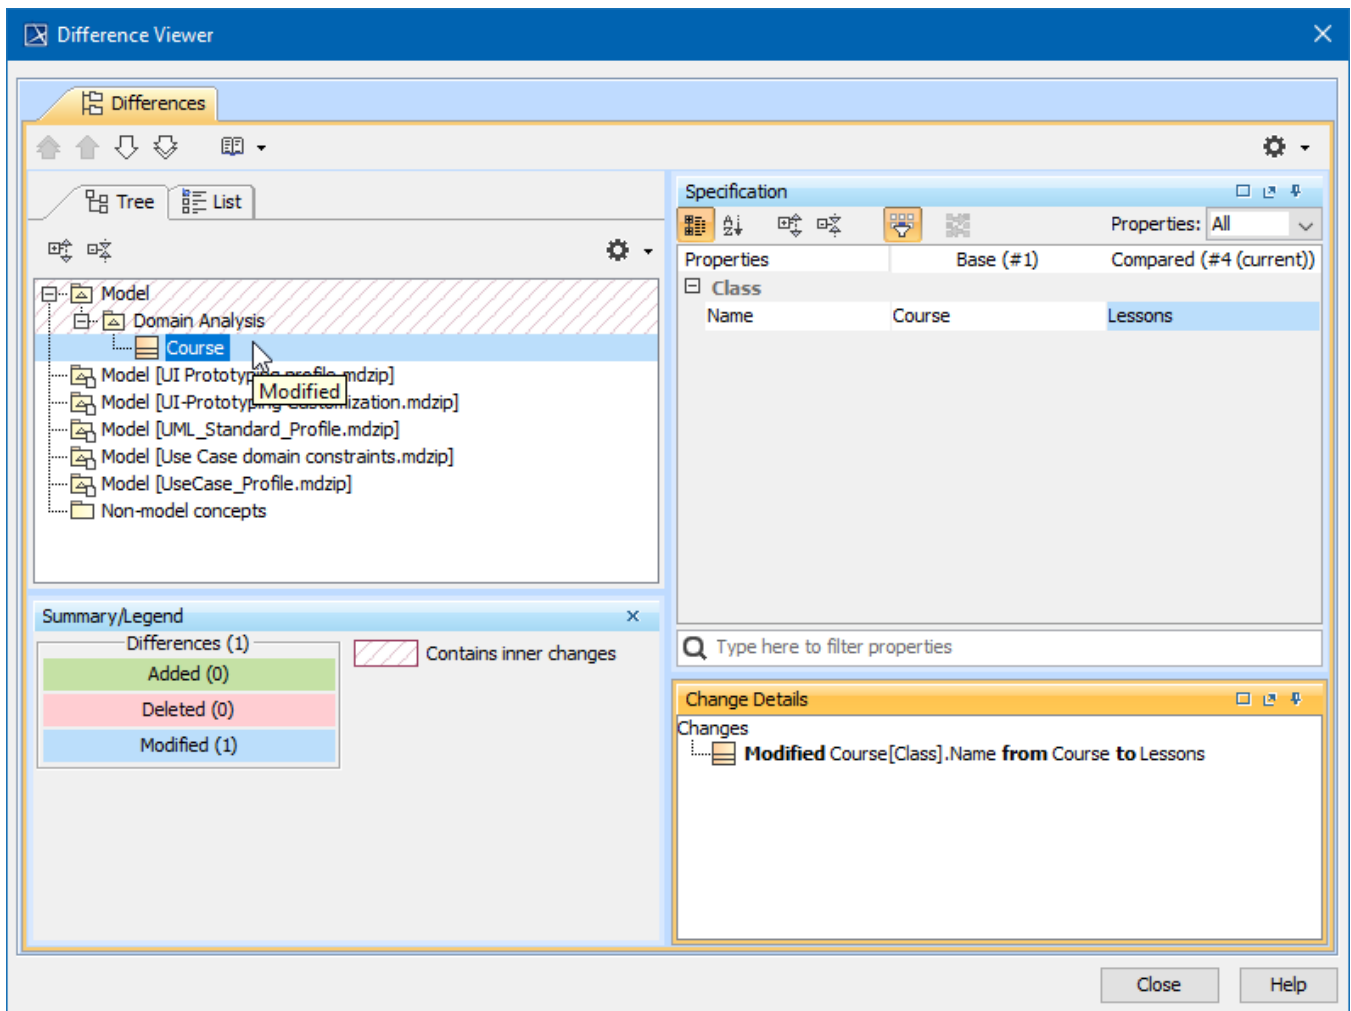

You can also choose the same commands from the toolbar of the **History** panel.

After you select the **Quick Diff** command, a dialog opens that shows changes in element property values (see the following figure). Different colors help identify new, modified, and deleted values. You can analyze exact changes in the textual value of the selected property in the **Text Diff** box. If you want to see the original texts of both versions, click the Compare property values button  on the toolbar of the dialog to open the **Compare property** dialog and then click **Original Texts**.

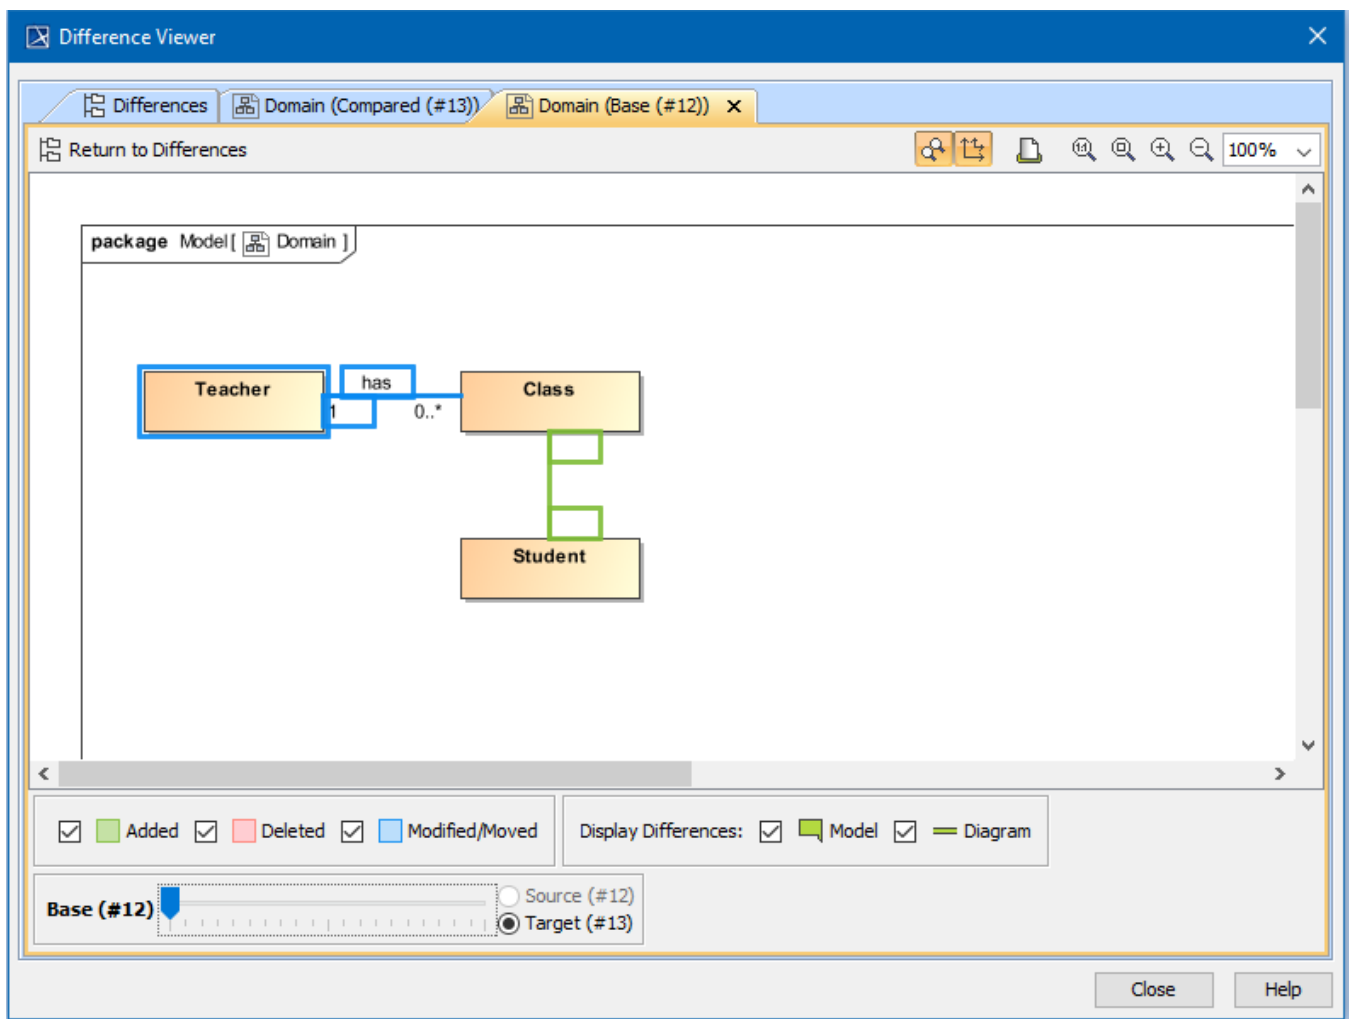

An example of the Quick Diff dialog of an element (class).

After you select the **Full Diff** command for an element, the **Difference Viewer** dialog opens, showing changes in element property values, as well as detailed information for directly related elements and new relationships (see the figure below). For more information about using this dialog, see [Analyzing comparison results](#).

An example of the Difference Viewer dialog of an element.

After you select the **Full Diff** command for a diagram, the **Difference Viewer** dialog opens, showing all changes in the diagram (see the figure below). For more information about using this dialog, see [Viewing and analyzing differences of modified diagrams](#).

An example of the Difference Viewer dialog of a diagram.

Be aware that Quick Diff is not available for displaying diagram changes. Diagram changes (as diagram layout changes) can be displayed only in the **Full Diff** mode. To see these changes you must initiate the comparison of entire project versions. For this, select a couple of project versions in the **History** panel and on the shortcut menu click **Compare Projects**. For more information, see [Analyzing comparison results](#).

## Generating reports

To generate an element history report

1. Perform element history as described above.
2. On the **History** toolbar, click the Generate Report button.

3. The **Save As** dialog opens to specify the location of the report file.
