Creating a part

To create a part, do one of the following

- In the **Composite Structure** diagram palette, select **Part** and click on the diagram.
- In the Containment tree, select an element, which can be defined as a part type, and drag it to the composite structure diagram.

Creating a new composite structure diagram for the type of the part

To create a new composite structure diagram for the type of the part, do one of the following

- Select a part and from the smart manipulator toolbar, choose the New Composite Structure Diagram button.

- A new diagram is created under the part type.
- If type was not assigned for the selected part then a new type is created automatically.

- From the part shape's shortcut menu, select **Create Diagram** and then diagram from the list. This accelerates the creation of composite structure diagram (the **Create Diagram** menu item is available only if the type is specified for the part).

Defining a type of the part

To define a type of a part, do one of the following

- On a diagram pane, draw a new part and in the opened **Select Type** list, select a type.

The **Select Type** list is not displayed if the **Type Selection Mode** is disabled. [How to turn on the Type Selection Mode >>](#)

- On a diagram, select a part and press Ctrl+T (for MAC OS X press Cmd+T) and in the opened **Select Type** list, select a type.
- On a diagram, select a part and from the smart manipulator toolbar, select the **Specify Type** button. In the **Select Type** dialog, select a type.
- On a diagram, select a part and then type the name of the type after a ":". The type will be created with the specified name.
- In the part [Specification window](#), **Type** property specification cell, select a type.

When creating a port on a part, if a part does not have a specified type, a new type for the part is created automatically.

The rake icon  is displayed on the shape if the interaction use refers to another composite structure diagram. The rake icon is not shown by default therefore you need to set the [Show Rake Icon](#) property value to true in the [Symbol Properties](#) dialog.

Hiding the multiplicity

To hide the multiplicity next to the part's type

1. Right-click the part shape and select **Symbol Properties**.
2. In the **Symbol Properties** dialog, set the **Show Multiplicity** property value to *false*.
3. Click **Close**.
