

# Starting the validation

Validation can run on:

- The entire model, or its part (e.g. several packages).
- Diagram, table, matrix, or relation map
- Elements

To start the validation of the entire model or its part

---

1. Open the **Validation** dialog. [How to open the Validation dialog >>](#)
2. Specify the following options:
  - **Validation Suite**.
  - **Validate For**.
  - **Minimal Severity**.  
[Learn more about each of the option >>](#)
3. Click **Validate**.  
The model or its part is validated against the selected validation suite.

To validate the diagram, table, matrix, or relation map

---

- On the toolbar of diagram, table, matrix, or map, click the **Validate Diagram** button .
- Right-click the diagram, table, matrix, or map in the [Containment tree](#), select **Validation** >  **Validate Diagram**.

To validate the element(s)

---

1. Right-click the element in the [Containment tree](#).
2. In the shortcut menu, point to **Validation** and select:
  - **Validate Element** - to validate only selected element.
  - **Validate Elements Recursively** - to validate all child elements of the selected element.
