Image Shape

The image shape provides a simple and quick way to insert a image into a diagram. Images may include logos, graphs, tables, or others. The default shape size after the insertion is the actual image size.

You can format image shape representation properties in the **Symbol Properties** dialog.

To insert an image on the diagram pane

1. On the diagram palette, in the **Common** category, click the **Image Shape** button or press the **I** key.
2. Click on the diagram pane. The **Open** dialog opens.
3. Browse for an image in the *.gif, *.jpg, *.jpeg, *.svg, or *.png format and click **Open**.
