Selecting criteria

On this page

- Specifying element type
- Specifying dependency criterion
- Specifying relationship direction
- Specifying what elements are visible in the matrix

To create a Dependency Matrix, first of all, you need to define which data you wish to display on its pane. Select row and column element types, row and column scope, the direction of the relationships as well as the dependency criteria for this. Be advised that the easiest way to define all the abovementioned criteria, except the type of the relationship direction, is using the drag-and-drop operation.

A lot of properties of the Dependency Matrix can be specified in the matrix Specification window.

(can open the matrix Specification window in one of the following ways:

- From the matrix shortcut menu
- From the matrix toolbar

Specifying element type matrix.

To specify a row/column element type

Do either:

• In the Model Browser, select one or more elements which types you wish to see on your matrix and drag them to the Row Element Type/Column Element Type box in the Criteria area.

0	
 For the multiple selection Press and hold Shift or Ctrl. 	
 If you want to add additional elements, press and hold of Containment 	Ctrl while dragging the elements to the Row Element Type/Column Element Type box.

 Include Aggregation and Composition - select to include Aggregation and Composition relationships along with the Association relationship.

the Include Aggregation and Composition option can be specified in the Relationship Properties dialog only if the Association or

custom Association relationship is selected as a Relation Criterion.

- In the Style column, click the button to select how the relationship is represented in the matrix .
 When you're done, click Close, then OK.

Specifying relationship direction

To specify a relationship direction

Do either:

• Select a direction from the Direction drop-down list in the Criteria area.

 Open the matrix Specification window, click the Direction property value cell and select what direction relationships you wish to see on your matrix. Click Close.

Specifying what elements are visible in the matrix

To specify what elements you wish to see in the matrix: related, non-related, or all

Do either:

- From the Show Elements drop-down list in the Criteria area, select
 - With relations if you need to see only related elements from the selected scope.
 - ° Without relations if you need to see only non-related elements from the selected scope.
 - All if you need to see both related and non-related elements from the selected scope.
- Open the matrix Specification window, click the Show Elements property value cell and choose one of the values described above. Click Close.

After the Show Elements value is changed, you should always refresh a matrix.

Once criteria are specified, you can create the matrix. Click 🗧 on the Dependency Matrix toolbar.

Row Element Type:	Class,Interface	Column Element Type:	Class,Interface	
Row Scope:	High Level Domain An	Column Scope:	User	
Dependency Criteria:	Abstraction	Direction: Both 👻	Show Elements: All	
The dependency matrix content is outdated. 🕏 <u>Refresh?</u> <u>Do not show this message again</u> 💌				

When a Dependency Matrix contains a large number of rows and/or columns, it may become difficult to work with, as you need to scroll in order to see certain parts of it. In this case, you can select to exclude cells (either rows or columns) that contain relationships and make your Dependency Matrix view more compact.

To specify what cells to display on the matrix

- 1. From the Show Elements drop-down list in the Criteria area, select either
 - Columns without relations to show columns without relationships and all rows.
 - Rows without relations to show rows without relationships and all columns.

Show Elements:	All
2. Librarian IM	All
	With relations
	Without relations
	Columns without relations
	Rows without relations
_	

2. Click 🔁 to refresh the matrix.
