

Content diagram

Functionality Availability

This feature is available in Standard, Professional, Architect, and Enterprise editions.

The Content diagram is an extension of UML notation. The purpose of the Content diagram is to generate or represent a project structure (diagrams) and the relations between them. The Content table works as a table of contents for a project. The Content Shape creates a table of contents of all diagrams of the project.

All Content diagrams have their own specifications. You can specify their name, documentation, and view the relationships in which they participate. You can also add [stereotypes](#), [tagged values](#), and [constraints](#). For more information about diagram creation, read [Creating Diagrams](#).

Content diagram palette

Free Form Diagram

Free Form diagram gives capability to draw various geometrical shapes and symbols used in business workflow description diagrams.

Double click diagram icons below to view diagrams.
