All Teamwork Cloud and Cameo Collaborator for Teamwork Cloud resources are sorted by categories. The sections below explain how to create new categories and manage existing ones.

 After creating/editing/removing a category, that category in other applications will not be updated immediately.

Creating categories

You can either create a category when publishing a model from a modeling tool or create it directly in the Resources app. Follow the steps below to create a category in the Resources app.

To create a category

1. Open the Resources application.
2. Click  on the bottom right corner of the screen. The **Create category** dialog opens.

 **Creating a nested category.**
To create a category nested in another category, navigate to the intended parent category before completing step 2.

3. Enter the new category name in the **Category name** field.
4. Click the **Create** button.

The image shows a 'Create category' dialog box. It has a title 'Create category' at the top. Below the title is a text input field labeled 'Category name *' with the word 'Projects' entered. At the bottom right of the dialog are two buttons: 'CANCEL' and 'CREATE'. A hand cursor is pointing at the 'CREATE' button.

The category is created and shown in the repository together with other categories.

Renaming categories

If necessary, rename existing categories as described below.

To rename a category

1. Open the Resources application and navigate to the category you want to rename.

2. Click  next to the category and select **Rename category**. The **Rename category** dialog opens.
3. Enter a new category name in the **Category name** field.
4. Click the **Rename** button.

Rename category

Category name *

Obsolete documents

CANCEL RENAME

After completing the above steps, you can see the category with a new name in the repository.

Removing categories

You can remove categories without deleting the resources they contain.

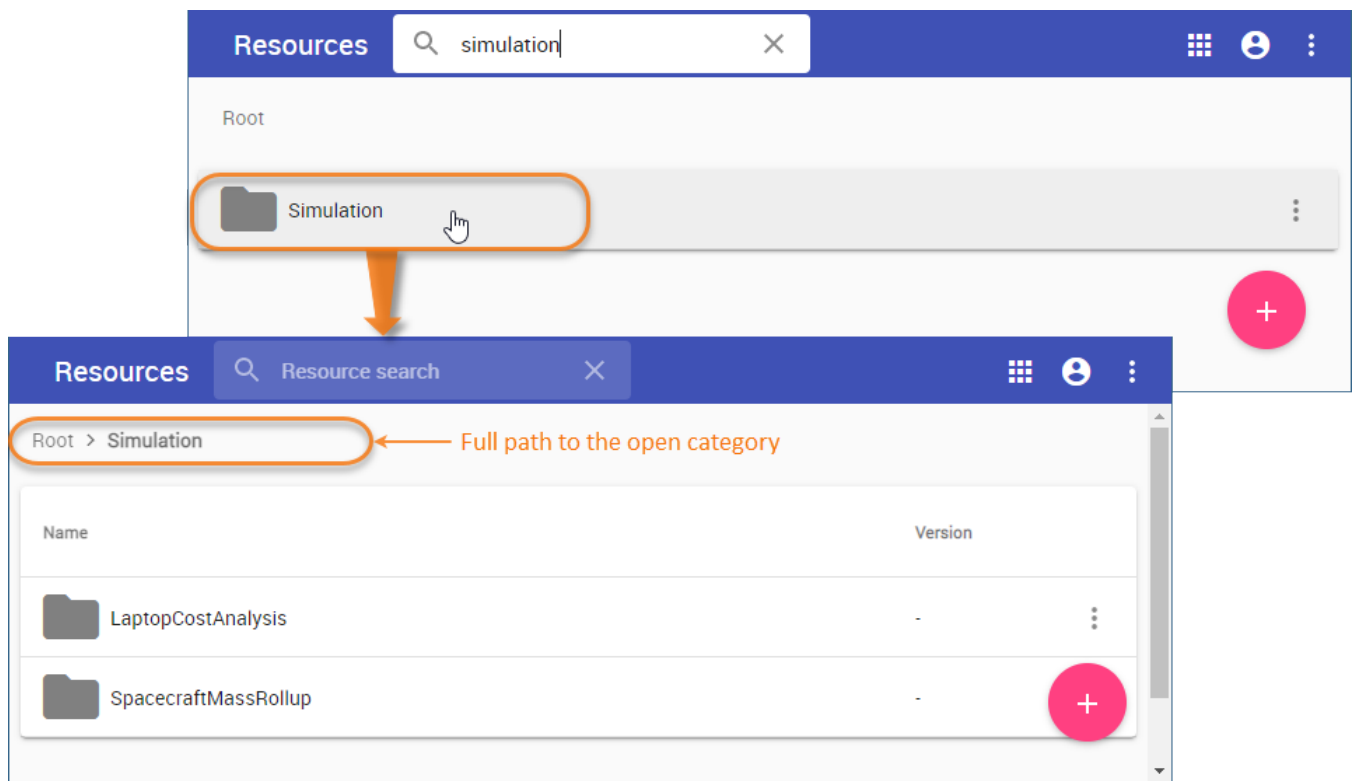

To remove a category

1. Open the Resources application and navigate to the category you want to remove.
2. Click  next to the category and select **Remove category**.
3. When you get the message asking if you want to remove the category, click **Remove**.

The category is removed and all the resources it contained are moved to the **Uncategorized** category.

Navigating in categories

Teamwork Cloud supports nested categories so you can organize your resources in a folder-like manner. To see the contents of a specific category, click it as displayed below. The full path to an open category is displayed just below the app bar.

Setting category classifications

Category classifications that you set through data markings allows you to control access to that category. To set a category classification, [enable data markings](#) in the Settings menu and ensure you have [sufficient permissions](#).

To set a category classification

1. Go to the Resources application and locate the category to set its classification.
2. Click  next to the category and select **Edit category details**.
3. In the **Classification** drop-down select the desired data marking.
