

# Working with Strategic Parametric diagram

## Description

A Parametric diagram includes the usage of a [constraint block](#) to constrain the properties of another Capability. It contains [constraint properties](#) and constraint parameters as well as other properties from within that internal block context. All properties displayed, other than the constraints themselves, must either be bound directly to a constraint parameter or contain a property that is bound to a constraint parameter (through any number of containment levels). A constraint block generally contains many constraints, each of them containing many constraint parameters.
