

Services Roadmap

Description

The Services Roadmap (Sv-Rm) domain shows the service changes over time. It provides an overview of how service changes over time. It shows the combination of several services mapped against a timeline. The Services Roadmap (Sv-Rm) domain presents a whole lifecycle view of resources (services), describing how it changes over time. It shows the structure of several resources mapped against a timeline.

In addition, this model is useful in support of net-centric (service-oriented) implementation of services. This model can present a timeline of services that evolve or are replaced over time, including services that are internal and external to the scope of the architecture.

The intended usage of the Services Roadmap (Sv-Rm) domain includes:

- Development of incremental acquisition strategy.
- Planning technology insertion.

Implementation

The Services Roadmap (Sv-Rm) domain is represented by a [Services Roadmap diagram](#) which is realized as a time based diagram.
