Working with Services Connectivity table

On this page

- Adding new Service Exchanges
- Adding existing Service Exchanges
- Adding Service Functions

The Services Connectivity Table (Sv-Cn) addresses service exchanges between services.

You can add any available kind (such as Information Exchange, Materiel Exchange, Organizational Exchange, Energy Exchange) of Service Exchanges in this table.

Adding new Service Exchanges

To add new Service Exchange

1. In the Services Connectivity Table toolbar, click the **Add New** button. The **Realized Services Exchange** wizard opens.
2. Follow the steps of the wizard.
3. Click **Finish** when you are done.
   The rows with created Service Exchanges are added to the table.

Adding existing Service Exchanges

To add an existing Service Exchange

1. In the Service Connectivity Table toolbar, click the **Add Existing** button. The **Select Service Exchange** dialog opens.
2. Select Service Exchanges by clicking the **+** button.
3. Click **OK** when you are done.
   The rows with selected Service Exchanges are added to the table.

ⓘ
- Service Exchange Identifier, Service Exchange Item Name, Producing and Consuming Activities, and a wide range of measurement cells are editable in the table.

Adding Service Functions
Other cells are read-only.

To add Service Functions and modify the Service Exchanges, you can use Services Taxonomy (Sv-Tx) diagram.

- You can use **Service Exchange Manager** dialog that enables you to analyze and manage the Service Exchange data.
1. In the Service Connectivity Table, click a Service Exchange row for which you want to add Service Functions.
2. In the table toolbar, click the **Service Functions** button. The **Producing and Consuming Service Functions** dialog opens.
3. In the open dialog, choose the producing and consuming Service Functions.
4. Click **OK**.
