Working with Resources to Capabilities Mapping matrix

Resources to Capabilities Mapping (Rs-Tr) addresses the direct and indirect linkage between resources (Operational Agent, Resource Performer, Service, Actual Service, Actual Resource) and Capabilities specified in the Strategy domain.

The Rows of this matrix are resources (Operational Agent, Resource Performer, Service, Actual Service, Actual Resource) and the Columns are Capabilities.

To build the Matrix

1. Specify **Rows** scope (Resources);
2. Specify **Columns** scope (Strategy);
3. Click the button.

Resources map to capabilities using the "Exhibits" relationship.

To map a resource to a Capability, double-click the intersection between the desired elements. Double-clicking the intersection again will delete the relationship.
