

Applying industrial symbols

Industrial symbols can be applied to the nodes, performers, and concept roles in the OV-1 and NOV-1 diagrams.

If you want to use industrial symbols in your model, you can

- create **Performer with Image** or **Concept Role with Image** from the toolbar (1)
- click the **Image Library** item on the element smart manipulator (2)

Two ways of using Image Library

Use the **Select Image** dialog to browse the hierarchy of the industrial symbols. The dialog provides the Simple Search. In the search field, type what you want to find in the hierarchy.

You can easily find recently used symbols by opening the **Recently used** tab.

You can also apply an industrial symbol to any UAF element by using the element's specification window, image property.
