

Building NCV-7 matrix

The Capability to Services Mapping Matrix (NCV-7) depicts which Services contribute to the achievement of a Capability directly or using the [implied relations](#).

The rows of this matrix represent Services and the columns represent Capabilities.

To build a NCV-7 matrix

1. Specify the Row Scope (Services).
2. Specify the Column Scope (Capabilities).
3. Click the **Refresh** button.

Services exhibit Capabilities using the Exhibits relationship.

To map a Service to a Capability

- Double-click an empty intersection.

To remove the relation

- Double-click a full intersection between the desired elements.
