

Properties tab

The **Properties** tab at the bottom of the Model Browser allows you to quickly access basic information about a selected element or diagram.

An example of the Properties tab in the Quick properties panel

Multiple selection

- If multiple elements or symbols of different kinds are selected, only their common properties are displayed in the **Properties** tab.
- If more than 10 elements in the Containment tree or symbols on the diagram pane are selected, properties are displayed only by request. You need to click the link **Show common properties for the selected items**.

To open the **Properties** tab, do one of the following

- In the Model Browser, click the **Properties** tab.
- On the **Window** menu, click **Properties**.

The **Properties** tab includes the following tabs:

| Tab name | Description |
|----------|--|
| Element | Contains the main properties of the element's or diagram's specification. |
| Symbol | Contains the element symbol's properties. <div> This tab is available for symbols only.</div> |
