Importing requirements

It is recommended that you import requirements into a separate project which can be used in other models as a used project. How to manage used projects >>

You can import requirements in one of the following ways:

- By importing ReqIF files.
- By syncing Excel or CSV files with Requirement table.
- By importing data from Excel or CSV file.
- By pasting into Requirement table.
- By pasting into Requirements diagram, or Containment tree.
- Using Cameo DataHub.

- Importing ReqIF files
    - Applying automated post-processing scripts after ReqIF file import
    - Importing ReqIF files from the command-line interface
- Interchanging of requirements using Cameo DataHub
