Diagram image export

You can export images of diagrams (tables, matrices, maps, etc.) that contain Data Markings using the following methods:

- Save as Image
- Print as PDF / Print Preview
- The images are also represented in the reports generated via the Report Wizard

> ⓘ **Export to Excel/CSV files**
>
> If you are exporting tables with Data Markings, using 📄 **Export** will create new elements instead of importing the existing ones once the file is imported. To avoid that, make sure to use 📊 ▾ **Excel/CSV Sync** instead.
