

Creating contextual Satisfy

You can create a contextual Satisfy relationship by simply dragging-and-dropping the selected property onto the requirement directly from the [Structure tab](#).

To create a contextual Satisfy relationship

1. In the [Structure tab](#), locate the property that satisfies the selected requirement.
2. Place it onto the requirement and select **Create Satisfy (contextual)**. The relationship is created.

Creating a contextual Satisfy relationship from the Structure tab.

Dragging-and-dropping a property from another [Model Browser](#) tab results in the automatic creation of a non-contextual Satisfy relationship.
