

Properties tab

The **Properties** tab at the bottom of the Model Browser allows you to quickly access basic information about a selected element or diagram.

An example of the Properties tab in the Quick properties panel

Multiple selection

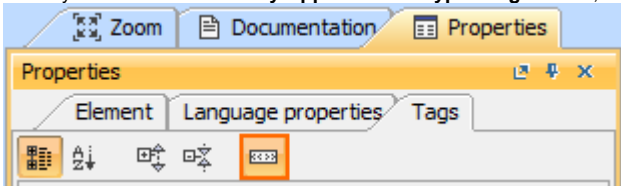

- If multiple elements or symbols of different kinds are selected, only their common properties are displayed in the **Properties** tab.
- If more than 10 elements in the Containment tree or symbols on the diagram pane are selected, properties are displayed only by request. You

need to click the link **Show common properties for the selected items**.
To open the **Properties** tab, do one of the following

- In the Model Browser, click the **Properties** tab.
- On the **Window** menu, click **Properties**.

The **Properties** tab includes the following tabs:

Tab name	Description
Element	Contains the main properties of the element's or diagram's specification.
Symbol	Contains the element symbol's properties. <div> This tab is available for symbols only.</div>

Tags	<p>Contains the tagged values of the selected element.</p> <p>When you click the Show Only Applied Stereotypes Tags button, only the tabs with values are listed.</p>  <p>The screenshot shows a software interface with three tabs: 'Zoom', 'Documentation', and 'Properties'. The 'Properties' tab is active and contains three sub-tabs: 'Element', 'Language properties', and 'Tags'. The 'Tags' sub-tab is selected and highlighted with an orange border. Below the sub-tabs is a toolbar with several icons, including one that looks like a list or table, which is also highlighted with an orange border.</p>
Language properties	<p>Contains the same data as the Language Properties property group in the element's Specification window.</p> <div data-bbox="358 464 1313 548"> <p> This tab is available only for the elements used for code generation, that is, class, attribute, and operation.</p> </div>
Traceability	<p>Contains the same data as the Traceability property group in the element's Specification window.</p>
