Creating a datatype property
To model a datatype property as a class attribute

1. Create a class, name it *Class 1*.
2. Click on the black circle with the white plus sign in the center of it.

3. Select **Property.**

4. A default property appears in the class. The property is also called a *class attribute.*

5. Double - click on the default property. Its **Specification window** appears.

6. Click on the **Type** field. A shortcut menu appears. Select *boolean.* (or any datatype property you want)
7. Click **Close.**

The result should look like this:

The class element with a datatype property *unnamed1.*
