Converting users to internal or external

There are two types of users in Teamwork Cloud: internal and external. Internal users are created inside the system, whereas external users are imported from LDAP servers. An authorized user can convert an external user to an internal one and vice versa. When you convert a user from internal to external, you can select the LDAP domain this user will be mapped to.

To convert a user to internal

| In the User application, do one of the follow Click the external user you want Internal. | wing: to convert. In the open User pane, c | lick ? | Unknow | n Attachment | and select Convert to |
|---|--|--------|--------|--------------|-----------------------|
| × User | | | | | |
| john_s | Disable user | | | | |
