

Creating element values

In Cameo Collaborator for Teamwork Cloud, you can create values for stereotype tags and textual properties right in a Cameo Collaborator document. This will simplify your workflow because you will no longer need a modeling tool or any workarounds to add new values to your model.

To create a value for a stereotype tag

1. In a Cameo Collaborator document, click  on the bottom right corner of the content pane.
2. On the content pane, select the item you want to create a value for.

Editable items are highlighted in yellow when hovering over them with a mouse pointer.

3. On the bottom of the **Edit** pane, click the **Add new value** button.
4. When a new value card is added, enter the desired value.

5. Click  to save the value.

The screenshot shows the 'Edit' pane with a blue header and a white content area. At the top, there is a row of buttons. The fourth button from the left is highlighted with a yellow circle and contains a black right-pointing arrow. Below this row, there is a list of existing values. The first item in the list is '= 44'. Below the list is a card for adding a new value. The card has a light gray header with the text 'Value *' and a text input field containing '0'. To the right of the input field is a small black trash can icon. At the bottom of the card is a yellow footer bar with the text '+ ADD NEW VALUE' in white. Three orange arrows point to specific parts of the interface with corresponding instructions:

1. Click to add a new value (points to the '+ ADD NEW VALUE' button)
2. Enter the value (points to the '0' input field)
3. Click to save the value (points to the yellow arrow icon)

Creating a value for a stereotype tag in a Cameo Collaborator document.

To create a value for a textual property

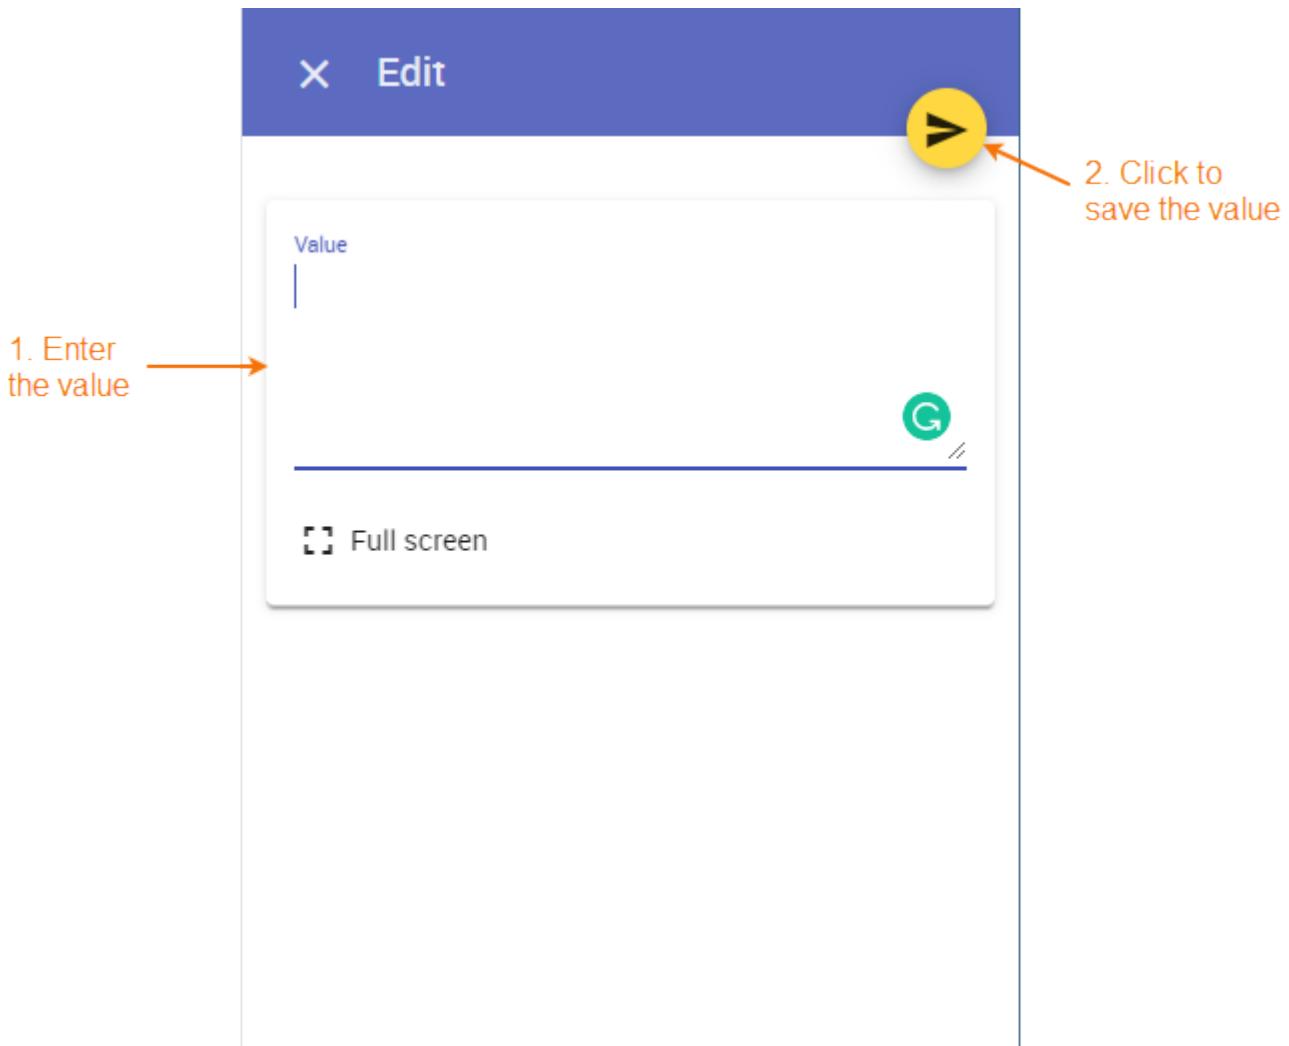

1. In a Cameo Collaborator document, click  on the bottom right corner of the content pane.
2. On the content pane, select the item you want to create a value for.

Editable items are highlighted in yellow when hovering over them with a mouse pointer.

3. When the **Edit** pane opens, enter the desired value in the value card.

4. Click  to save the value.
