

Collaboration powered by 3DEXPERIENCE platform

CATIA Magic and No Magic modeling tools support collaboration on UML/SysML/UAF models in the 3DEXPERIENCE platform. You can use a modeling tool to create and store your projects in the 3DEXPERIENCE platform. Moreover, different team members can work on the same project simultaneously, commit new versions of the project to the platform, and update the project when new versions become available.

There are two ways you can start a collaboration session in the 3DEXPERIENCE platform:

- Open a modeling tool and [log in to the 3DEXPERIENCE platform](#).
- Use the [Design with CATIA Magic app](#) in the 3DEXPERIENCE platform to open a modeling tool installed on your computer.

To learn how to collaborate on projects in the 3DEXPERIENCE platform, see:

- If collaboration powered by the 3DEXPERIENCE platform is enabled, you cannot work with Teamwork Cloud or Cameo Collaborator.
- Unsupported plugins:
 - Cameo Collaborator Publisher
 - Model Obfuscator.
 - Cameo Concept Modeller. Contact [Customer Support](#) for the workaround.
