Developer Guide

Introduction

Java APIs

- Execution
  - Starting execution
  - Stopping execution
  - Creating and registering a new SimulationExecutionListener
- Engine
  - Creating a new execution engine
  - Creating an execution engine descriptor
  - Creating an execution engine listener
  - Registering an execution engine to the Simulation Manager
  - Activating and deactivating an element
  - Triggering an Event
  - Printing messages in Simulation Console
- fUML Helper
- Parametric Helper as executing parametric simulation from an Activity
