CSV export

On this page
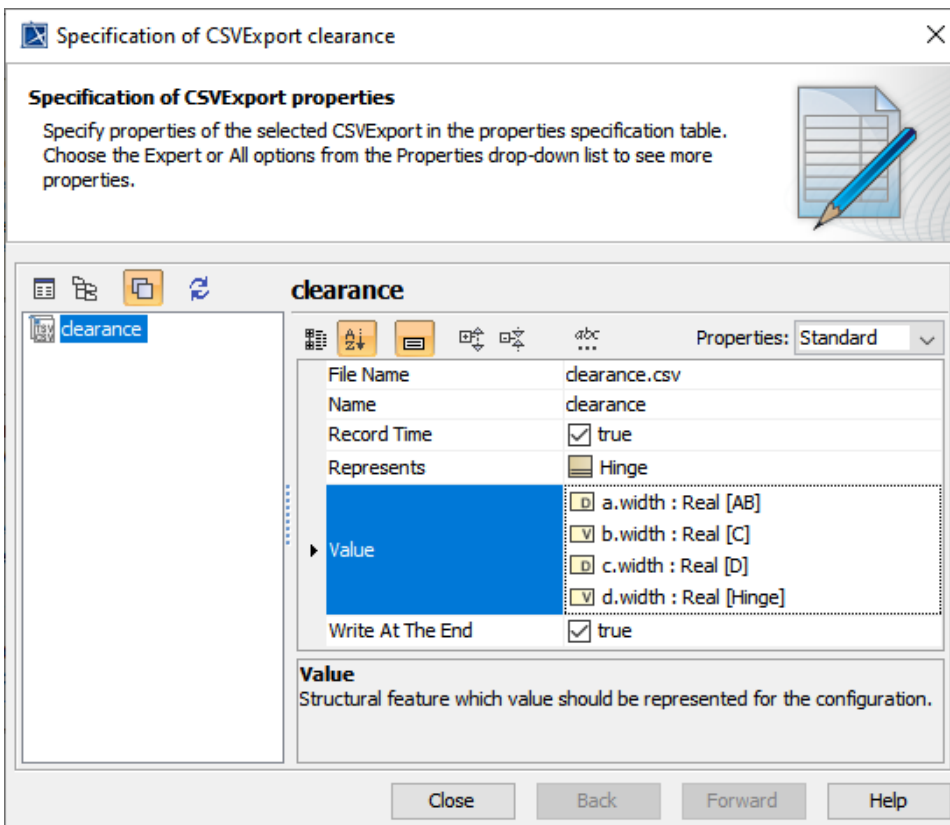

- [Support of Part properties](#)

As of Version 18.4, Magic Model Analyst can export simulation results to a CSV file.

A new configuration, called **CSV Export**, has been added to export simulation results to a CSV file. CSV files take the following properties:
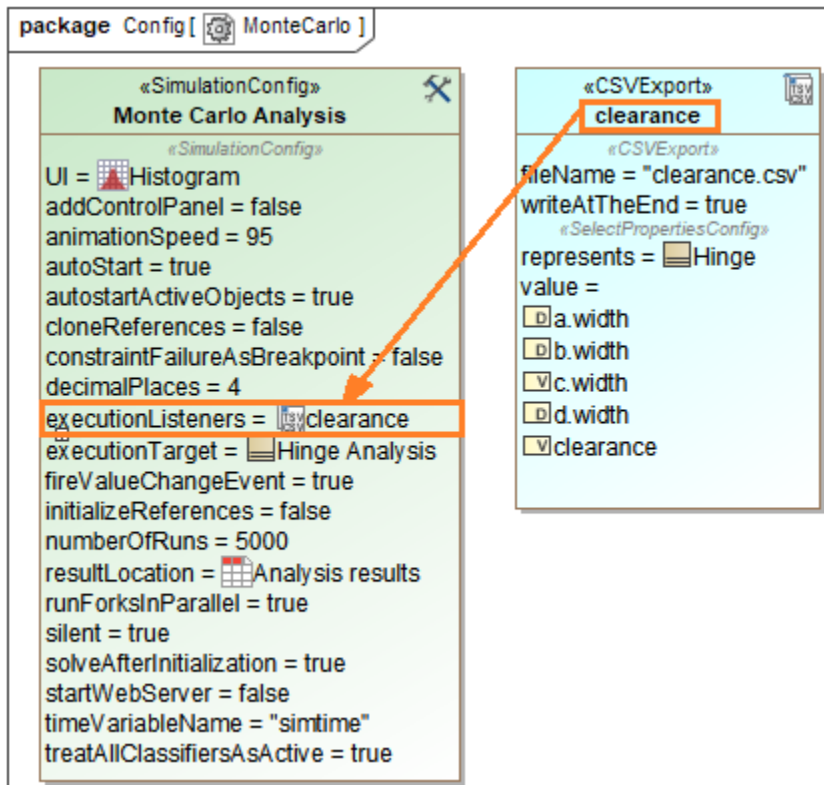

- **File Name**
  The name of the file that the exported results are written into. The path is the same as the project directory (by default). Alternatively, a full path may be specified as *D:\ExportedCSVResults.csv*
- **Record Time**
  If **true** (by default), time will be recorded in the first column of the exported CSV file.
- **Represents**
  Specifies the Classifier represented by the Configuration.
- **Value**
  Specifies the properties of the Classifier (including nested properties) whose values will be recorded and written to the CSV file.
- **Write At The End**
  Records values only once at the end of execution, right before termination, rather than listening and recording value changes during the execution. When **Number of runs** is more than 1 in the main configuration, the values are recorded once in each iteration.

To export simulation results to a CSV file

1. Open a sample simulation project from the samples folder of Magic Model Analyst. Here the **HingeMonteCarloAnalysis** sample is used.
2. Drag the **CSV Export** Configuration from the toolbox to the Simulation Configuration diagram.
3. Double-click the **CSV Export** Configuration and fill in values for **File Name**, **Represents**, and **Value** from its Specification window. The **File Name** property is the name of the file in the project's working directory. The **Record Time** property is for recording time in the first column of the exported CSV file. The **Represents** property specifies the Classifier represented by the Configuration, and the **Values** property refers to the values selected which will be written to the exported CSV file. Optionally, you can also set the **Write At The End** property to record values only once at the end of execution before termination. The following figure shows the parameters of CSV Export configuration.

Specification of CSVExport clearance

Specification of CSVExport properties

Specify properties of the selected CSVExport in the properties specification table. Choose the Expert or All options from the Properties drop-down list to see more properties.

clearance

Properties: Standard

clearance	
File Name	clearance.csv
Name	clearance
Record Time	☑ true
Represents	Hinge
Value	a.width : Real [AB]
	b.width : Real [C]
	c.width : Real [D]
	d.width : Real [Hinge]
Write At The End	☑ true

Value
Structural feature which value should be represented for the configuration.

Close   Back   Forward   Help

4. Set the created **CSV** export as a tagged value of the **executionListeners** tag definition of the Simulation Configuration. This step is important for the results to be written to file. See the CSV export configuration below:

package Config [MonteCarlo]

«SimulationConfig»
Monte Carlo Analysis

«SimulationConfig»
UI = Histogram
addControlPanel = false
animationSpeed = 95
autoStart = true
autostartActiveObjects = true
cloneReferences = false
constraintFailureAsBreakpoint = false
decimalPlaces = 4
executionListeners = clearance
executionTarget = Hinge Analysis
fireValueChangeEvent = true
initializeReferences = false
numberOfRuns = 5000
resultLocation = Analysis results
runForksInParallel = true
silent = true
solveAfterInitialization = true
startWebServer = false
timeVariableName = "simtime"
treatAllClassifiersAsActive = true

«CSVExport»
clearance

«CSVExport»
fileName = "clearance.csv"
writeAtTheEnd = true
«SelectPropertiesConfig»
represents = Hinge
value =
a.width
b.width
c.width
d.width
clearance

5. Run the simulation and then stop it. The results will be written to the **File Name** specified in Step 3. See the parameters of CSV Export configuration below:

```
time(ms),clearance,d.width,a.width,b.width,c.width
0.0000,0.4825,34.3849,1.9571,1.9546,29.9907
0.0000,0.4258,34.6383,1.9683,1.9703,30.2738

0.0000,1.2639,34.6046,1.9602,1.9578,29.4226
0.0000,0.8996,34.5504,1.9554,1.9690,29.7265
0.0000,1.3454,34.5987,1.9513,1.9770,29.3250
```

Support of Part properties

Not only can CSV export the values of properties with primitive types, e.g., Real, Integer, etc., but it can also export the types of the properties that are not primitive. Selected Part names in the **value** tag will be used as headers, and type names will be used as values of exported CSVs as shown in the figure below.

«CSVExport»
Subtypes CSV

«CSVExport»
fileName = "Subtypes"
writeAtTheEnd = false
«SelectPropertiesConfig»
represents = ▭BrakeTradeStudy_Subtypes
value =
  🄿Main.wheel.brake.caliper
  🄿Main.wheel.brake.pad
  🄿Main.wheel.brake.rotor
  ☑score

«SimulationConfig»
Subtypes TradeStudy

«SimulationConfig»
addControlPanel = false
animationSpeed = 95
autoStart = true
autostartActiveObjects = true
cloneReferences = false
constraintFailureAsBreakpoint = false
executionListeners = 📋Subtypes CSV
executionTarget = ▭BrakeTradeStudy_Subtypes
fireValueChangeEvent = true
initializeReferences = false
numberOfRuns = 1
recordTimestamp = false
rememberFailureStatus = false
resultLocation = ▭Subtypes TradeStudy
runForksInParallel = true
silent = false
solveAfterInitialization = true
startWebServer = false
timeVariableName = "simtime"
treatAllClassifiersAsActive = true
