2022x Refresh1 Hot Fix 1 Version News

2022x Refresh1 Hot Fix 1 is now available for CATIA Magic and No Magic portfolios. It includes Collaboration Powered by the 3DEXPERIENCE platform improvements, an improved launcher for MAC OS Ventura, and several bug fixes.

> ⚠ **Hot Fix version compatibility**
> The version and Hot Fix number of a modeling tool and its plugins must be the same. After installing the Hot Fix version of a modeling tool, select the same Hot Fix version when downloading its plugins. The modeling tool will not work correctly if you install plugins of a different version and/or Hot Fix number.

Collaboration Powered by 3DEXPERIENCE Platform

- Used Project handling principles have been redesigned internally for better performance and stability.
- An error that appeared when trying to add a new project to the 3DEXPERIENCE platform has been fixed.
- The issue where branches could not be created in the 3DEXPERIENCE platform has been fixed.
- The Cameo Collaborator Publisher plugin has been disabled and does not work with the 3DEXPERIENCE platform.

Improved Launcher for MAC OS Ventura

- Application launching with APP is supported on MAC OS Ventura for modeling tools version 2021x Refresh2 HF4. Learn more >>>

Other

Unsupported plugins

If collaboration powered by the 3DEXPERIENCE platform is enabled, the following plugins and features are not supported:

- Cameo Collaborator Publisher
- Model Obfuscator.
- Cameo Concept Modeller. Contact Customer Support for the workaround.
- Publishing MDzipx file to Teamwork Cloud for CATIA Systems Synthesis Analysis.

Magic Model Analyst / Cameo Simulation Toolkit

- The issue related to the Activity loop that includes SendSignalAction has been fixed.

Magic Systems of Systems Architect / Cameo Enterprise Architecture / UAF 1.2

- The issue where the exported .xlsx file was not working correctly has been fixed.
