

Notation

Maps to a UML Attribute with the stereotype XSDnotation. This attribute must be added into the UML class with the stereotype XSDschema.

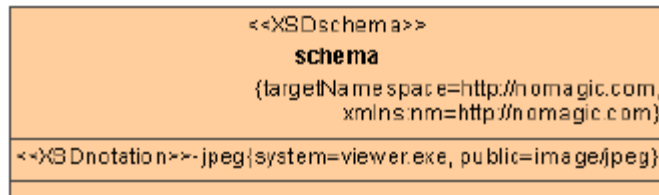

- name maps to UML Attribute name
- annotation maps to UML Attribute documentation

notation XML representation summary

```
<notation
  id = ID
  name = NCName
  public = anyURI
  system = anyURI
  {any attributes with non-schema namespace...}>
  Content: (annotation?)
</notation>
```

XML representation of a notation declaration

```
<xs:notation name="jpeg" public="image/jpeg" system="viewer.exe">
```

notation UML model example.

notation XML code sample

```
<xs:schema xmlns:nm = "http://nomagic.com" xmlns:xs = "http://www.w3.org/2001/XMLSchema" targetNamespace = "http://nomagic.com">
  <xs:notation name = "jpeg" public = "image/jpeg" system = "viewer.exe"/>
</xs:schema>
