

Sensitive Element Types

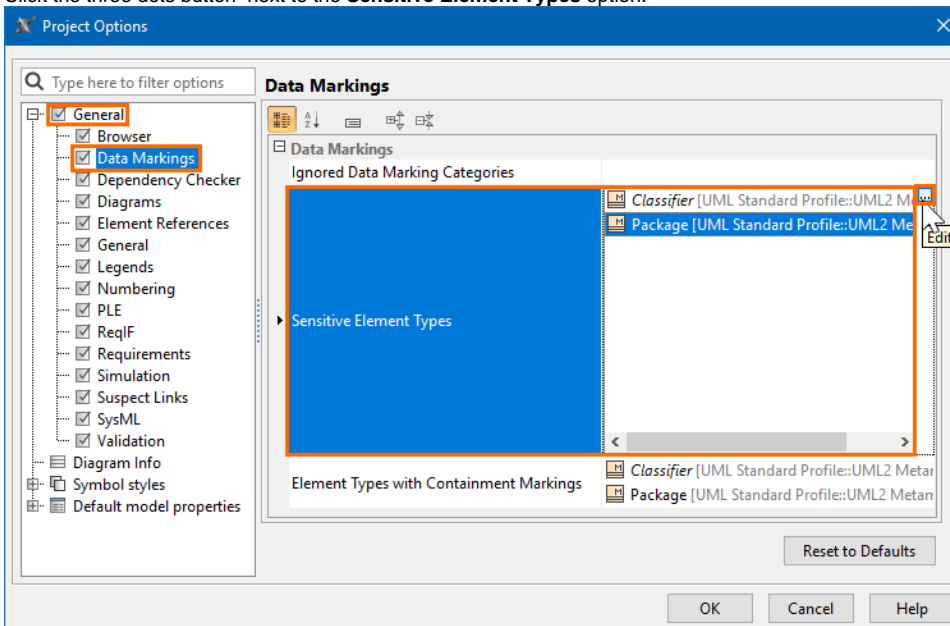

Data Markings can only be added ([individually](#) or [recursively](#)) to the element types specified in the Sensitive Element Types project option. By default, the option is set to the *Classifier* and *Package* element types.

You can use validation to check whether all elements of the specified element type have Data Markings added. If there are any elements without Data Markings, the [Missing Data Marking](#) validation rule is prompted.

Specifying sensitive element types

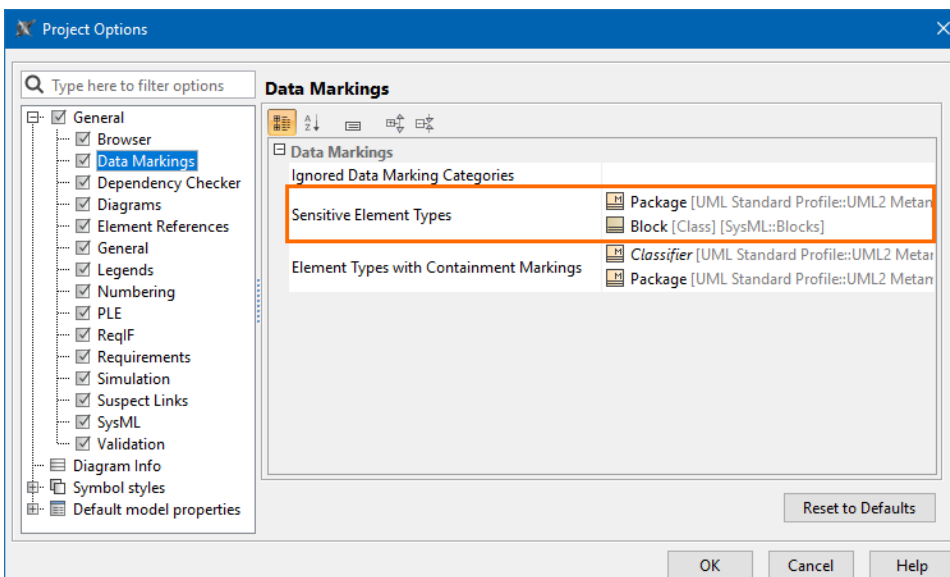

To specify sensitive element types

1. In the main menu, select **Options > Project**. The **Project Options** dialog opens.
2. In the **General** group, select **Data Markings**.
3. Click the three dots button next to the **Sensitive Element Types** option.

4. In the **Select Element Type** dialog, select the element types you want to make sure always have Data Markings added. Click **OK**.

By default, the option is set to *Classifier* and *Package*.

5. Click **OK**.
