Managing Data Markings

On page:

- Adding Data Marking(s) to an element
- Adding Data Marking(s) to multiple elements
- Removing Data Marking(s) from an element
- Removing Data Marking(s) from multiple elements
- Displaying element Data Markings in documentation hyperlinks

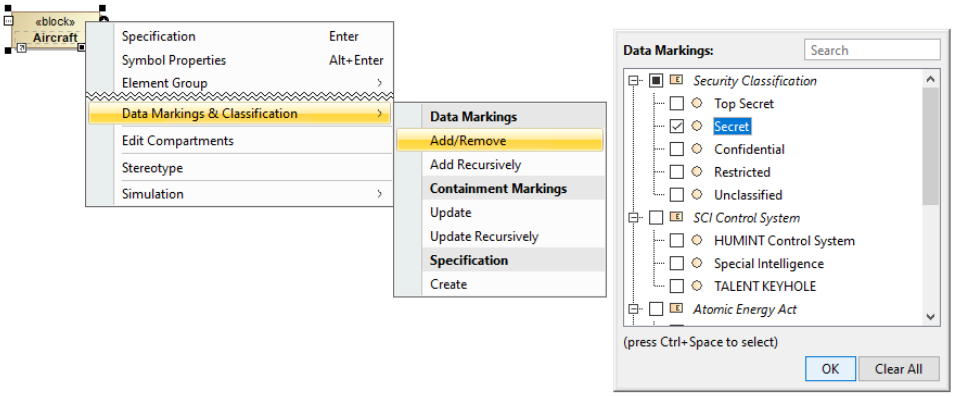
You can add selected Data Markings to your project elements, as well as remove individual or all Data Markings added to an element via the Data Markings & Classification shortcut menu. The Data Markings in the shortcut menu are displayed as their portion markings.

To add Data Markings, make sure to specify the Sensitive Element Types project option with the element types that you want to be able to add Data Markings to.

Adding Data Marking(s) to an element

To add Data Marking(s) to an element

- Right-click an element or its symbol > select **Data Markings & Classification** in the shortcut menu > in the **Data Markings** section, click **Add /Remove** > in the Data Markings menu, select the Data Marking(s) you want to add. Click **OK**.



Adding Data Marking(s) to multiple elements

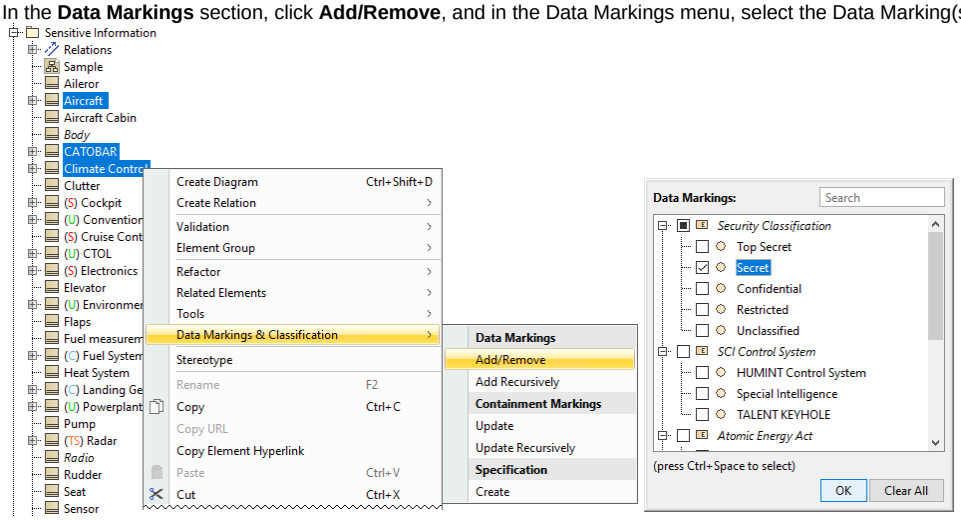
To see how to add selected Data Markings to multiple project elements via the parent element (recursively), see the Adding Data Markings Recursively page.

To add Data Marking(s) to multiple elements

---

1. Hold the Ctrl key and select the elements or their symbols you want to add a Data Marking to.
2. Right-click one of the selected elements/symbols, and in the shortcut menu, select **Data Markings & Classification**.

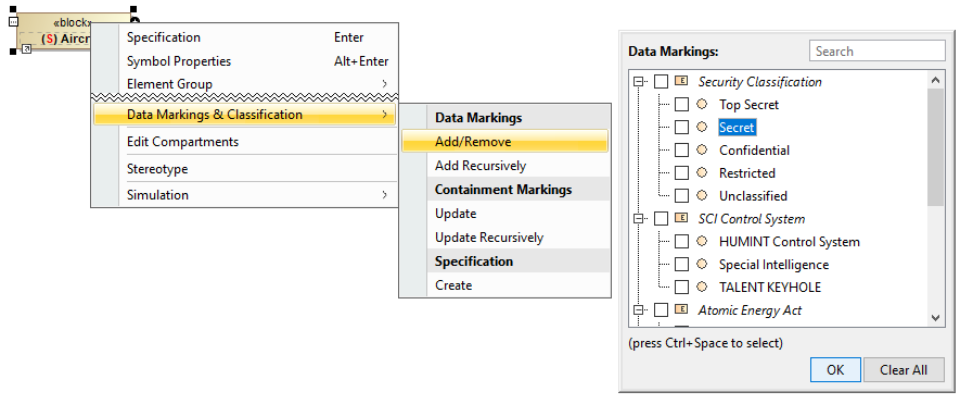
3. In the **Data Markings** section, click **Add/Remove**, and in the Data Markings menu, select the Data Marking(s) you want to add. Click **OK**.



Removing Data Marking(s) from an element

To remove Data Marking(s) from an element

- Right-click an element or its symbol > select **Data Markings & Classification** in the shortcut menu > in the **Data Markings** section, click **Add /Remove** > in the Data Markings menu, clear the selection for the Data Marking(s) you want to remove. Click **OK**.



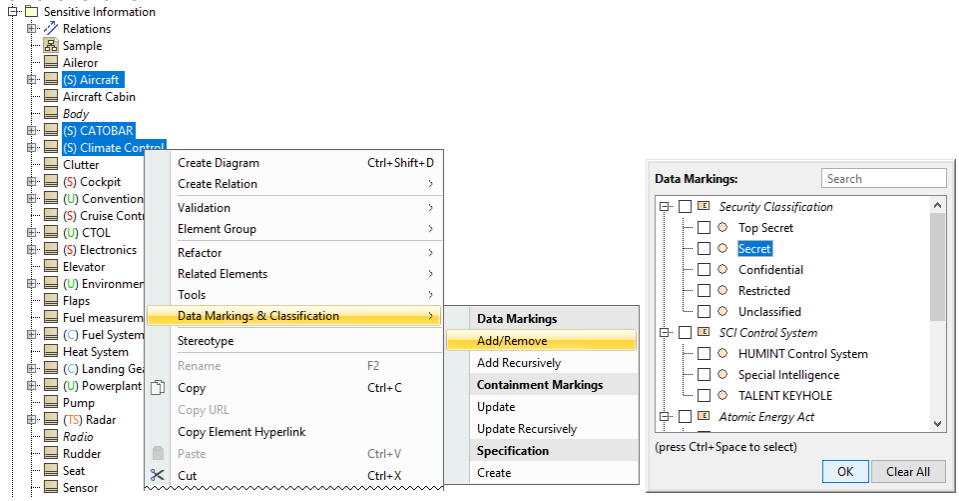
Removing Data Marking(s) from multiple elements

To remove Data Marking(s) from multiple elements

---

1. Hold the Ctrl key and select the elements or their symbols you want to remove a Data Marking from.
2. Right-click one of the selected elements/symbols, and in the shortcut menu, select **Data Markings & Classification**.

3. In the **Data Markings** section, click **Add/Remove**, and in the Data Markings menu, clear the selection for the Data Marking(s) you want to remove. Click **OK**.



Displaying element Data Markings in documentation hyperlinks

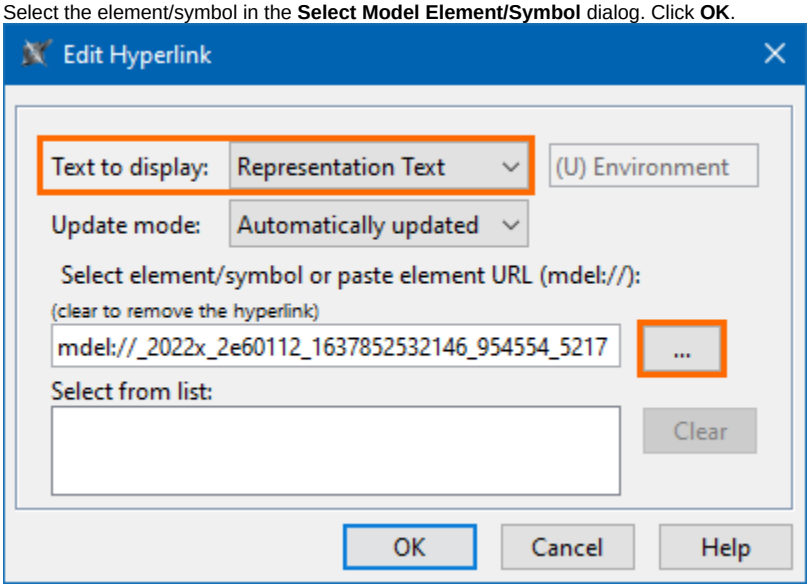
To display element Data Markings in documentation hyperlinks

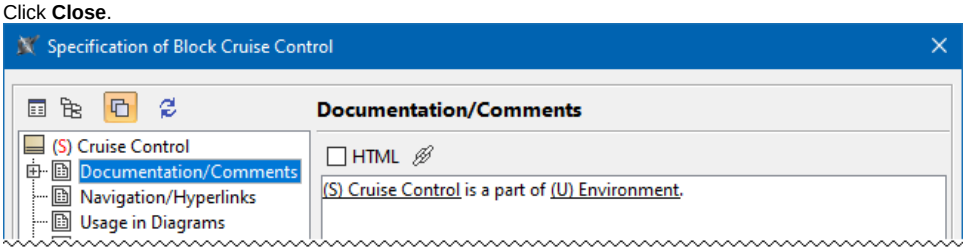
---

1. Open the Specification window of an element.
2. Select the **Documentation/Comments** property group.
3. Write the information you want to document.

4. Click the **Insert Hyperlink** button. The **Edit Hyperlink** dialog opens.
5. For the **Text to display** option, select **Representation Text**.

6. In the **Select element/symbol or paste element URL** field, click the three dots ... button.
7. Select the element/symbol in the **Select Model Element/Symbol** dialog. Click **OK**.





8. Click **Close**.
