

Creating CV-2 diagram

The CV-2 should be modeled just before the [CV-1](#) is completed.

To create a CV-2 diagram

1. Create Capabilities.
2. Connect the Capabilities using Generalizations (general-specific relationships) or Aggregations (whole-part relationships).

You can also link Capabilities with the Operational Performers and Resources using Exhibits relationship. Relationship can be associated with environmental Conditions by filling in the *environmentConditions* property and expressing the civil, military or physical conditions required for the realization of target Capability.
