

# Creating S1 diagram

You can create S1 just before finishing an [L1 view](#) or in later stages of the architecture just before finishing the [P1 view](#). It depends on the usage of Service and Request Ports in the architecture.

To create an S1 diagram

---

1. Create Service Interfaces.
2. Connect Service Interfaces using Generalizations (general-specific relationships).

The S1 view also allows you to show the Capabilities and Service Interfaces mapping.
